

PICKER EPU

*All machines
fully integrated
in one
machine
control.*

For loading of various cartons, boxes and crates and for equipping feeding systems.

The highlights.

- Intuitive, easily understandable operation, user interface with graphic support in national language. Can be operated without robot programming skills as fully integrated in one machine control. For example laying schemes can be adjusted and changed through the display of up-or downstream machines.
- Real-time synchronization of motion profiles and axes
- Flexible to use, can be combined with cartoning machines and box erectors or box closing systems
- Operating radius of 1200 mm and a load capacity of up to 6 kg, depending on the performance
- Quick, tool-free format change
- Small footprint
- The whole packaging process can be controlled via ROVEMA P@ck-Control and runs with smooth and gentle movements. This protects product and packaging, even at high speeds and ensures a longer machine service life.
